2025

# 1. IMPORTANT INFORMATION

## Tools (not included)

Screws

Screwdriver

1. Find the joints with holes.

2. Match the number on the branch with the number on the joint.

3. Insert the branch into the hole.

4. Repeat for all branches.

The tree arrives disassembled, with numbered branches and joints featuring holes for each branch. In some cases, screws and a screwdriver may be required for additional fixation at the base, and, on rare occasions, for the branches. It is up to the contractor to determine whether this step is necessary.
